Times Microwave Systems Introduces a new Custom Coiled Cable

For many of us, coiled cables are reminiscent of the old kitchen landline phone. Today, the curly cord has taken a new role as a high-performance coax cable. Times' new Custom Coiled Cables are an excellent option for dynamic installations in tight spaces.

Initially designed for HD video transmission on heavy trucks, these assemblies have since been used on portable weather stations and several other applications.

"This is an example of how our engineering team thinks outside the box to meet our customer's unique needs," said **Dave Kiesling**, Director of Commercial Sales for TMS.

These assemblies are perfect for RF systems with frequencies up to 3 GHz.

Features include:

- Compatibility with LMR-195 connectors
- Excellent anti-vibration stability
- Durability over repeated flexure and extension with a long work life
