Silicone Dioxide (SiO₂) Cable

Unlocking the Secrets of the Universe

Scientists use particle accelerators to unlock the secrets of the universe. Traveling at nearly the speed of light, sub-atomic particles speed in a beam that must stay precisely in line with the target. Silicon dioxide (SiO₂) cable assemblies play an important role in guiding the beams in their tunnels.

Our SiO₂ assemblies are designed to withstand the rigors of an Ultra High Vacuum (UHV) environment. Hermetically sealed and cryogenic compatible at -271.3°C, colder than the (-270.5°C) of outer space, our SiO₂ assemblies deliver the phase matching, phase stability and radiation resistance that is enabling the next generation of scientific discovery.
