Radiofrequency Ablation (RFA) and Microwave Ablation (MWA)

Working for a
healthier world.

Among medical treatments available, two minimally invasive procedures lead the way. Radiofrequency ablation (RFA) and microwave ablation (MWA) respectively use electrical and microwave energy to **heat precision** areas and destroy abnormal cells.

Catheter to Generator

The **TFT™** family of cables are the right solution. They're small, flexible and nimble enough for the precise movements needed when performing this procedure.

Inside Generator

TCOM® 400 and **SFT 304** are easy to install in tight and compact places. Their kink-free design makes them the ideal choice for installations with lots of flexing twists and turns.
